North Bakken Expansion Project

- WBI Energy is proposing to construct, operate and maintain the North Bakken Expansion Project.
- The project consists of an approximately 60-mile long, 20-inch diameter natural gas pipeline from WBI Energy’s existing Tioga Compressor Station near Tioga, North Dakota, to an interconnect with Northern Border Pipeline Company’s mainline south of Watford City, North Dakota.
- A new compressor station, Elkhorn Compressor Station, will be constructed near the interconnect, southeast of Watford City, North Dakota.
- The project involves construction of approximately 20 miles of 12-inch diameter natural gas pipeline between the existing Tioga Compressor Station and an existing receipt station.
- The project also involves the addition of horsepower at the existing Tioga Compressor Station, uprates to WBI Energy’s existing Line Section 25, and additional/modifications to certain receipt/delivery points and laterals along the pipeline routes.

Why is this project proposed?

- The North Bakken Expansion Project will add natural gas takeaway capacity (estimated at approximately 200,000 Mcf/day) to help meet the natural gas transportation needs in the Bakken region while reducing natural gas flaring.
