

OPERATIONAL SAFETY

WBI Energy has nearly a century of experience designing, constructing and operating a safe and reliable natural gas pipeline system that extends about 4,000 miles across portions of Minnesota, Montana, North Dakota, South Dakota and Wyoming.

OPERATIONS & MAINTENANCE PROCEDURES

- Advanced computer system combined with aerial and ground patrols to provide 24/7 pipeline monitoring, with special emphasis on areas that might be susceptible to ground movement.
- Company pipeline facilities are under the control of the Gas Control Center in Bismarck, North Dakota, where gas flow and operating conditions are monitored by professional staff 24/7.
- Electronic internal inspection of the pipeline to detect abnormalities or possible corrosion.
- Public education and awareness program for landowners, emergency responders, contractors and public officials.
- Above-ground pipeline markers to alert the public to the pipeline's presence and communicate pertinent emergency contact information.
